Astro Lords [Oort Cloud] is a Cross-platform Free to play, real-time strategy MMO Space Game where Strategy Meets Shooter.

In this (Astro Lords) real time strategy game, you'll build your own asteroid bases, send spies out to enemy territory, and fight against other spaceships with drag-and-click arcade style PvP combat. Moving bases on a 3D spherical map makes Astro Lords one-of-a-kind, bringing an entirely new dimension to multiplayer challenges. Astro Lords also seamlessly combines three different gameplay genres - construction management, arcade-style shooting, and strategic raid warfare – into one cohesive experience. Astro Lords is the first MMORTS to successfully balance such diverse genres into one consistent universe. To accomplish this, Aratog Studios employed a full-time team of twenty who spent more than three years developing the game.

A distinctive feature of the game is a big seamless world all players explore and conquer, regardless of the device the game is run on, which is made possible by using Unity 3D engine. Astro Lords: Oort Cloud provides captivating gameplay as well as the ability to continue playing from the last checkpoint, even on a browser or different platforms (Windows, Mac OS, Linux). Combining base construction, research, real-time space battles and sophisticated player cooperation, the game delivers a whole new experience to all RTS genre fans.
